                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RESULT 7
A43391
TRH-like tripeptide - alfalfa
Cispecies: Medicago sativa (alfalfa)
Cispecies: Medicago sativa (alfalfa)
Cipate: 15-Uun-2001 #sequence_revision 15-Jun-2001 #text_change 15-Jun-2001
CiAccession: A43391

"The physiological role of the lymphoid system. VI. The stimulatory effect of leucophilic gamma globulin (leucokinin) on the phagocytic activity of human polymorphonuclear leucocyte.";
Biochemistry 6:3386-3392(1967).
-- MISCRELLAMSTOUS: An IgG (called leucokinin) binds reversibly to the cell membrane of neutrophils in the blood. Leucokininase on the membrane releases the active peptide tuftsin from the gamma chain. Tuftsin is essential for maximum stimulation of the phagocytic activity of neutrophils.

Grimm-Joergensen Y., McKelvy J.F.;
"Biosynthesis of thyrotropin releasing factor by newt (Triturus viridescens) brain in vitro. Isolation and characterization of thyrotropin releasing factor.";
J. Neurochem. 23:471-478(1974).
-!- FUNCTION: TRH functions as a regulator of the biosynthesis of TSH in the anterior pituitary gland and as a neurotransmitter/
neuromodulator in the central and peripheral nervous systems.
-!- SUBCELLULAR LOCATION: Secreted.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

Nature 226:321-325 (1970).

-1- FUNCTION: TRH functions as a regulator of the biosynthesis of
in the anterior pituitary gland and as a neurotransmitter/
in the anterior pituitary gland and peripheral nervous systems.

-1- SUBCELLULAR LOCATION: Secreted.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Peptides 15:31-36(1994).

-!- FUNCTION: Myoactive; cardioexcitatory substance. Pharmacological activities include augmentation, induction, and regularization of cardiac contraction.

-!- SUBCELLULAR LOCATION: Secreted.
-!- SIMILARITY: Belongs to the FARP (FMRFamide related peptide)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       an acyl-protein thiolester.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Swartzman E., Kapoor S., Graham A.F., Meighen E.A.;
"A new Vibrio fischeri lux gene precedes a bidirectional termination
                                                                                                                                                                                                                                                                                   SPECIES=H.trivolvis, TISSUB=Kidney;

The AAT variant can be used to inhibit bacterial infections, esp. those caused by Corynebacterium dipthteriae, Bacillus anthracis and Pseudomonas aeruginosa, and to treat viral infections, esp. HIV and influenza. (Updated on 25-MAR-2003 to correct PN field.)

The present sequence is the reactive site loop of alpha-1 antitrypsin mutated variant Portland (also termed PDX). This portion of the PDX protein acts as the pharmacophore necessary for bological activity. The RSL forms a rigid backbone having positively-charged guanidino residues of each of the Arg residues extending in space away in the same direction from the rest of the PDX protein. Peptides or peptide minetics comprising this sequence inhibit bacterial toxins that are processed at a consensus furin recognition site, when administered in therapeutically effective amounts. Endoproteolytic activation of bacterial toxins and endolytic maturation of viral proteins is blocked by the peptide and peptide mimetics. This is useful in treating infections of cells by bacteria and viruses. It may also be used to inhibit processing of biologically active
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Convertase; inhibitor; alpha-1-antitrypsin; antiinflammatory; vulnerary; ophthalmological; dermatological; nephrotropic; hepatotropic; vasotropic; or antiinfertility; respiratory-gen.; cardiant; CNS-gen.; cerebroprotective; neuroprotective; nootropic; cytostatic; antiarthritic; antiarteriosclerotic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New furin endoprotease inhibitor that mimics a specific region of alphalantitrypsin Portland mutant, for treatment and prevention of bacterial and viral infection.
furin recognition site, endoproteolytic activation;
endolytic maturation viral protein; bacterial infection; viral infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Peptide fragment of alpha-1-antitrypsin, use as convertase inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ;

                                                                                                                                                                                                                                                                                                                  The present sequence is that of a peptide fragment of alpha-1-
antitrypsin. Convertase inhibitors of the invention may be derivatives of
antitrypsin. Convertase enzymes act, both extracellularly have
cestablished that convertase enzymes act, both extracellularly and
intracellularly, to cause the activation of latent transforming growth
factor-beta (TGP-beta) in the extracellular space at the site of a wound
of a fibrotic conditions. Thus, the present invention relates to use of
convertase inhibitors for the reduction of scarring during the healing of
convertase inhibitors for the reduction of scarring during the healing of
convertase inhibitors for the reduction of scarring during the healing of
convertase inhibitors for the reduction of scarring during the healing of
convertase inhibitor conditions,
convertase inhibitor conditions
conditions at fibrotic condition is a fibrotic disorder such as
convertase lunds (all claimed). The convertase inhibitor can also be used
conditions the treatment of hypertropic and keloid scars, scarring in the heart,
conditions the pelvis in the region of the
convertase leading to infertility, scarring following injury to the
convertase leading to infertility, scarring following a stroke
convertase infarction, central nervous system fibrosis following a stroke
cor neurodegenerative disorders (e.g. Alzheimer's disease), proliferative
cor neurodegenerative disorders (e.g. Alzheimer's disease), proliferative
cor neurodegenerative disorders (e.g. Alzheimer's disease), proliferative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                 Use of a convertase inhibitor in the manufacture of a medicament for reducing scarring during the healing of wounds or reducing fibrosis in the treatment of fibrotic conditions.

This invention relates to a novel method for modulating activity of betasite amyloid precursor protein (APP)-cleaving enzyme (BACE)

Secretasaes/sheddase. Cleavage of BACE by this enzyme results in the generation of a soluble BACE which enhances the production of the actiology of Alzeimer's disease. Inhibition of BACE secretase can be actiology of Alzeimer's disease. Inhibition of BACE secretase can be achieved by administration of an antisense nucleotide molecule capable of hybridising with BACE mRNA, by using a ribozyme that targets and degrades and inhibitor of BACE secretase activation. The methods of the enzyme with BACE or using an antibody or antagonist that can function as an inhibitor of BACE secretase activation. The methods of the creatment of as an inhibitor of BACE secretase activation. The methods of the creatment of a creatment of a natural processes sheddase by preventing cleavage of BACE, which is useful for the treatment of a neurodegenerative disorder characterised by the generation of Abeta protein, especially Alzheimer's disease. The invention also comprises a method for agentation of an agent that can alter the ability of BACE can be used for high throughput screening of candidate molecules. The invention also comprises a method for determining whether an individual is at risk of developing a neurodegenerative disorder characterised by the generation of Abeta protein by measuring the levels of BACE cerminal cleavage products in a sample or tissue where an individual is at risk of developing a person at risk. The present sequence represents the BACE proprotein convertase cleavage site used to create the prosegment deletion mutants of the invention
Modulating activity of beta-site amyloid precursor protein-cleaving enzyme secretase/sheddase for treatment of neurodegenerative disorder characterized by generation of Abeta protein, by preventing cleavage of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      beta-site APP cleaving enzyme; nootropic; neuroprotective;

This invention relates to a novel method for modulating activity of betasite amyloid precursor protein (APP)-cleaving enzyme (BACE)

Secretases/shedase. Cleavage of BACE by this enzyme results in the generation of a soluble BACE which enhances the production of the awyloidogenic peptide Abeta which has been shown to be involved in the actiology of Alzheimer's disease. Inhibition of BACE secretase can be achieved by administration of an antisense nucleotide molecule capable of Abbidiang with BACE mRNA, by using a ribozyme that targets and degrades con hybridising with BACE mRNA, by using a ribozyme that targets and degrades of the enzyme with BACE or using an antibody or antagonist that can function as an inhibitor of BACE secretase mRNA, mith a peptide that can interfere with binding of the enzyme with BACE or using an antibody or antagonist that can function as an inhibitor of BACE secretase states/sheddase by preventing cleavage of BACE, which is useful for the treatment of a neurodegenerative disorder characterised by the generation of Abeta control of an agent that can alter the ability of BACE secretase to associate with and process a known substrate, this method control of an agent that can alter the ability of BACE secretase to associate with and process a known substrate, this method control also comprises a method for determining whether an individual is at risk of developing a neurodegenerative disorder characterised by the generation of Abeta protein by measuring the levels of BACE of terminal cleavage products in a sample or tissue where an increase in cleavage products in a sample or tissue where an increase in cleavage products in a sample or tissue where an increase in cleavage products in a sample or tissue where an increase in cleavage products in a sample or tissue where an increase in cleavage products in a sample or tissue secretasing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; heparin binding protein; HBP; neutrophil elastase; antibacterial; cytokine IL-6; monocyte; bacterial infection; sepsis; septic shock;

The invention relates to an antibacterial peptide conforming to the generic peptide sequence appearing as ADK42632, the motif being derived from analysis of the protein sequences of human heparin binding protein, hHBP, pig pHBP and human neutrophil elastase (hNLB). Also included are a process for producing the new peptide (comprising providing an expression vector containing a DNA sequence encoding one or more of the abovementioned amino acid sequence encoding one or more of the above mentioned amino acid sequences, reansforming host cells with the vector, culturing the transformed host cells and purifying the expressed peptide is capable of inhibiting or stimulating the secretion of cytokine IL-6 from monocytes. The peptides are useful in manufacturing a medicament for the treatment of Gram-negative or Gram-positive bacterial infection, such as sepsis, severe sepsis, septic shock, disseminated intravascular coagulation, meningococcal meningitis or pneumococcal pneumonia. These cast is also be used in manufacturing a medicament for the stimulation or first the stimulation or firs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Beta-turn region, cyclic peptide, antimicrobial; disinfectant, therapy; preservative, amphipathic anti-parallel beta-sheet region; plant disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New peptides of heparin-binding protein and/or human neutrophil elastase for manufacturing a medicament for the treatment of e.g. bacterial infections, disseminated intravascular coagulation, cancer or autoimmune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              inhibition of inflammatory response, for the prevention of cell apoptosis, or for the treatment of individuals having suppressed immune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        system, cancer, autoimmune diseases and/or trauma. The present sequence represents an antibacterial peptide of the invention derived from human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
  meningococcal meningitis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
disseminated intravascular coagulation; meningococcal meningiti
pneumococcal pneumonia; inflammatory response; cell apoptosis;
suppressed immune system; cancer; autoimmune diseases; trauma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Beta-turn region used in cyclic peptide of the invention.

resistant Streptococcus pneumoniae. More generally they are active against Gram-positive or -negative bacteria, fungi, yeast and protozoa. Apart from clinical uses, (1) are also used as disinfectants and preservatives for medical equipment, foods, cosmetics etc., also for treatment of plant diseases. Compared with non-cyclised analogues (i.e. tachyplesin and protegrin type peptides), (1) and are more effective, with better bioavailability and/or serum half-life (increased resistance to proteolysis). They are more suitable for oral administration, can be used at lower doses and are unlikely to induce development of resistant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Beta-turn region; cyclic peptide; antimicrobial; disinfectant; therapy; preservative; amphipathic anti-parallel beta-sheet region; plant disease.
                                                                                                                                                                                                                                                                                             New cyclic peptide(s) with antimicrobial activity - contain amphipathic beta-sheet, loop and beta-turn regions, have better activity, bio:availability and protease resistance than linear analogues.
                                                                                                                                                                                                                                                                                                                                                                                              This sequence represents a beta-turn region used in a peptide of the invention. The peptides are cyclic peptides (1), which have: (a) an amphipathic anti-parallel beta-sheet region (SR), a loop region (LR) and a beta-turn region (TR); (b) a net positive charge at physiological ph; and (c) at least one basic amino acid (aa) in LR or TR. (1) are broad spectrum antimicrobials, specifically for use against E. coli, bedudomonas aeruginosa, methicillin-resistant Staphylococcus aureus (MRSA), vandomycin-resistant Enterococcus faecium and penicillin-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Beta-turn region used in cyclic peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        76.2%; Score 16; DB 2; Length 4; 100.0%; Pred. This sequence represents a beta-turn region used in a peptide of the invention. The peptides are cyclic peptides (I), which have: (a) an amplipathic anti-parallel beta-sheet region (SR), a loop region (LR) and a beta-turn region (TR); (b) a net positive charge at physiological ph; and (c) at least one basic amino acid (aa) in LR or TR. (I) are broad specifically for use against E. coli, peeudomonas aeruginosa, methicillin-resistant Staphylococcus aureus (MRSA), vancomycin-resistant Enterococcus faecium and penicillin-resistant Streptococcus penemoniae. More generally they are active against Gram-positive or -negative bacteria, fungi, yeast and protozoa. Apart from clinical uses, (I) are also used as disinfectants and protozoare treatment of plant diseases. Compared with non-cyclised analogues (i.e. treatment of plant diseases. Compared with non-cyclised analogues (i.e. tachyplesin and protegrin type peptides), (I) and are more effective, with better bloavailability and/or serum half-life (increased resistante to protecolysis). They are more suitable for oral administration, can be used at lower doses and are unlikely to induce development of resistant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Beta-turn region, cyclic peptide; antimicrobial; disinfectant; therapy; preservative; amphipathic anti-parallel beta-sheet region; plant disease.
                                                                                                                                                       New cyclic peptide(e) with antimicrobial activity - contain amphipathic beta-sheet, loop and beta-turn regions, have better activity, bio:availability and protease resistance than linear analogues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

(LR) and

Gu L, Chen J;

Chang C,

WPI; 1998-120472/11.

This sequence represents a beta-turn region used in a peptide of the invention. The peptides are cyclic peptides (I), which have: (a) an amphipathic anti-parallel beta-sheet region (SR), a loop region (LR) and a beta-turn region (TR); (b) a net positive charge at physiological pH; and (c) at least one basic amino acid (aa) in LR or TR. (I) are broad specifically for use against B. coli, peeudomonas aeruqinosa, methicillin-resistant Staphylococcus aureus (MRSA), vancomycin-resistant Enterococcus faccium and penicillin-resistant Streptococcus penemoniae. More generally they are active against Gram-positive or -negative bacteria, fungl, yeast and protozoa. Apart from clinical uses, (I) are also used as disinfectants and protozoa. Treatment of plant diseases. Compared with non-cyclised analogues (i.e. treatment of plant diseases. Compared with non-cyclised analogues (i.e. treatment of plant diseases. Compared with non-cyclised analogues (i.e. trachyplesin and protegrin type peptides), (I) and are more effective, with better bioavailability and/or serum half-life (increased resistance to protecolysis). They are more suitable for oral administration, can be unlikely to induce development of resistant New cyclic peptide(s) with antimicrobial activity - contain amphipathic beta-sheet, loop and beta-turn regions, have better activity, bio:availability and protease resistance than linear analogues. Gaps Reactive site loop, RSL, alpha-1 antitrypsin variant Portland; PDX, Portland protein, pharmacophore; guanidino residue, peptide mimetic; bacterial toxin; furin recognition site; endoproteolytic activation; endolytic maturation; viral protein; bacterial infection; Generic sequence-2 of the reactive site loop of Portland protein. ö 76.2%; Score 16; DB 2; Length 4; 100.0%; Pred. ```
The present sequence is the reactive site loop of alpha-1 antitrypsin mutated variant Portland (also termed PDX). This portion of the PDX protein acts as the pharmacophore necessary for biological activity. The RSL forms a rigid backbone having positively-charged quantidno residues of each of the Arg residues extending in space away in the same direction from the rest of the PDX protein. Peptides or peptide mimetics comprising this sequence inhibit bacterial toxins that are processed at a consensus furin recognition site, when administered in therapeutically effective manuals. Endoproteolytic activation of bacterial toxins and endolytic maturation of viral proteins is blocked by the peptide and peptide mimetics. This is useful in treating infections of cells by bacteria and viruses. It may also be used to inhibit processing of biologically active
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

claimed cyclic peptides and pay17301 to AAY17385 represent specifically claimed cyclic peptides and peptide segments. (I) are broad-spectrum artimicrobials (bioseratic or biocidal), effective against bacteria, yeast (e.g. Candida species), fungi and protozoa. Particularly they are used to control Bscherichia coli, Pseudomonas aeruginosa, vancomycin-resistant Enterococus acuseus and penicillin-resistant Staphylococcus aureus and penicillin-resistant Staphylococcus aureus and penicillin-resistant Staphylococcus and casinfections, in animals or plants, also as preservatives and disinfections, for medical quipment, foods, cosmetics, optionally as mixtures or in combination with other antimicrobials. Compared with linear analogues, (I) are more effective with better bioavailability and/or serum half-life (better resistance to proteolysis, allowing lower doses and making them more suitable for oral delivery). Since (I) are strunturally related to naturally occurring antimicrobial peptides, they are less likely to induce development of resistant strains
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 4 AA;

Antimicrobial cyclic peptides with amphiphilic beta-sheet region WPI; 1999-312941/26.

The present invention describes cyclic peptides (I): (i) comprising an amphiphilic anti-parallel beta-sheet region (A), a loop region (B) and a beta-turn (C); (ii) having net positive charge at physiological pH; and (iii) including at least one basic amino acid (aa) in (B) or (C). AAY09554 to AAY09683 and AAY17301 to AAY17385 represent specifically claimed cyclic peptides and peptide segments. (I) are broad-spectrum antimicrobials (biostatic or biocidal), effective against bacteria, yeast (e.g. Candida species), fungi and protozoa. Particularly they are used to control Escherichia coli, Pseudomonas aeruginosa, vancomycin-resistant Claim 3; Page 150; 167pp; English. AAYO9582

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Detecting autoantibodies from patients suffering from rheumatoid arthritis, by contacting a reactive peptide comprising citrulline residue or its analog with autoantibodies to form a complex, and detecting the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a novel method for detecting autoantibodies from parients suffering from rheumatoid arthritis. The method involves contacting autoantibodies with at least one reactive peptide comprising a citrulline residue or its analogue for a time sufficiently long to allow a complex to be formed between the autoantibody and peptide, and detecting the complex. The present sequence represents a peptide of the
linear analogues, (I) are more effective with better bioavailability and/or serum half-life (better resistance to proteolysis, allowing lower doses and making them more suitable for oral delivery). Since (I) are structurally related to naturally occurring antimicrobial peptides, they are less likely to induce development of resistant strains
                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

The invention relates to a novel stable pharmaceutical composition

comprising one or more interferon (IFN) beta compound(s) formulated for

mucosal delivery to a mammalian subject in combination with one or more

mucosal delivery to a mammalian subject to more into more into macosal delivery to a mammalian subject yields enhanced mucosal delivery of

mucosal administration to the subject yields enhanced mucosal delivery of

the one or more IFN-beta compound(s). A composition of the invention has

immunosuppressive and virucide activity. The composition is useful for

treating autoimmune diseases, viral disease, for alleviating one or more

symptom(s) of multiple sclerosis (MS), chronic hepatitis B, condyloma

acuminata, papilloma virus warts of the larynx or skin or childhood viral

encephalitis in the subject without unacceptable adverse side effects.

The composition can be delivered intranasally which reduces or eliminates

compliance problems and side effects that attend delivery by injection.

The sequences shown in ADG94002-AD94810 represent permeabilising

peptides used in a composition of the invention.
